

## The FintechOS Boilerplate

### About FintechOS

FintechOS is driving a paradigm shift in the way financial products and services are created by making banks and insurers truly customer-centric.

We consolidate critical data from multiple sources like existing databases and ecosystem APIs and these rich data insights are automatically plugged into every step of the customer journey to create truly personalized offerings. Our tech integrates seamlessly with existing IT systems and our low code tools quickly empower organizations to design valuable customer experiences.

These capabilities free our customers to tailor products, services, and interactions to a segment of one, increase ROI and decrease time-to-market.

**FintechOS Lighthouse** is designed to build end-to-end banking customer journeys that are fit for the future - it enables the delivery of smarter, personalized products and services. Pre-built functionality and low-code empower organizations to create value quickly. Move away from legacy systems or keep them in place - it's all possible.

**FintechOS Northstar**, our customer-centric platform for insurance lets insurers deliver clever products and services, at a faster rate. Our platform makes continuous innovation and fast go-to-market a reality. At the same time, it reduces cost via end-to-end digital customer journeys and increased efficiencies.

**The FintechOS Innovation Studio** opens up access to innovation through a low code framework. It's a space where your non-technical teams can create and launch personalized products and journeys - all driven by data and powered by automation.

More than 40 institutions run on FintechOS, including Erste Bank, Societe Generale, Scotiabank, Howden Group Holdings, Vienna Insurance Group and many more. Our reach spans 20 markets and four continents. We manage more than \$100bn in assets and have offices in London, Amsterdam and Bucharest.
